

Electrical Technician

Compensation: Competitive Base Salary, Bonus

Benefits: Medical, Dental, 401K, Personal Time, Paid Holiday's.

Summary:

- We currently have an opening for an experienced electrical technician with familiarity with or experience in creating electrical schematics and layouts.
- Position requires attention to detail and adherence to company standards and practice.
- Generation of electrical schematics, pneumatic schematics and electrical panel layouts in Autocad.
- Specifying wire and cable assembly requirements for sensors and actuators.
- Assembly and wiring of electrical panels and enclosures.
- Routing and wiring of assembly machines.
- The successful candidate will show a track record of design-to-schedule and team-oriented design skills, as well as extensive knowledge of industry best practices, tools and technologies.
- Perform other duties as assigned.

Position Requirements:

- Education - High School or GED equivalent
- Two or more years experience working with electrical systems or Technical College equivalent experience.
- A working knowledge of Autocad or similar 2-D drafting program
- Capable of using machine and hand tools
- Be able to take general instructions and interpolate based on common practice
- A general understanding of automation components and systems is preferred (valves, sensors, drives, etc.)
- Ability to adapt to company standards and willingness to learn new techniques and skills is a must.
- Must have a "what ever it takes" attitude to get projects completed accurately and on time.
- Demonstrated ability to complete projects to schedule and within budget.
- Knowledge in the use of electrical devices (i.e. sensors, switches, load cells, LVDT's, etc.).
- Must be capable of giving and taking direction.
- This position requires hands-on debug and testing of automated assembly machines.
- Practical skills in troubleshooting and general problem solving.
- Ability to work well cross-functionally and in a team environment crucial.
